

1.workflow in service flow mode can invoke user interact step. State true or false

False

2. How do we set conditions on the branch originating from the decision step?

a) Select the connector

Right click> Edit conditions

b) Double click on the connector & add conditions

3.Where is the condition added while using a decision point step?

4.Every workflow always starts with this step. Name this step

Start

5. Which color of the connectors indicate that they are anchored and connected between steps correctly?

Red at both ends

6. What happens if a BS with same name exists in the repository and on web client? Which one would get executed?

Repository sided BS

7. Single value fields referring to stored table columns are always

Read only

8. Multi value fields uses the following?

Multi Value Link

9. S_CONTACT_X is an extension table to which table?

S_CONTACT

10. What purpose does a user key serve in Siebel tables?

Prevent the user from entering duplicate records

11. Identify incorrect statement from below workflows...

Workflows are created in Siebel client

12. Which among these can be Loaded from file while simulating a business service on web client?

Business service Name and Method

Business service input arguments

Business service output arguments

13. Shirin, revises a workflow, makes changes to the latest version of the workflow. Will the changes be propagated to the previous version of the latest WF?

NO, it won't

14. Which of these statements are true with respect to workflow simulator considerations?

Can simulate WF having user interact step

15. Identify incorrect statement regarding decision step in Siebel workflow process

Each decision step has two branches based on the value

16. Steps to test a BS using simulator are provided. Arrange them properly

Select a business service name & BS method

Create the input property set with name & value pairs

Click the run on one input button

Examine the output set name/value pairs

17. Which process properties stores workflow related error code & Messages?

Error code, Error message

18. Validate in workflow process ensures all the errors to be caught. State true or false

False

19. What are the impacts of the publish/Activate button on WF?

- Sets the WF status to completed

-Transfers the definitions to run-time tables from the repository tables

20.is a graphically sequenced series of automation steps that supports a business process.

Workflow process

21. Which among these is not a operation supported by Siebel operation step?

Query Directional

22. Where do we create additional process properties in a workflow?

Process property tab in MVP Window

23. What is the version of any WF when you first create it? Choose the best option

A .Version = 0

- B. Version = 1
- C. Version can be set to any number
- A. Workflows are not versioned

24. Which color of the connectors indicate that they are anchored and connected between steps correctly? Choose most appropriate option.

- A. Red at one end and Black at other end
- B. Black at both ends
- C. **Red at both ends**
- D. It doesn't show any color

25. Which Business Service is defined in the Web Client?

- A. Built-in BS
- B. **Run-time BS**

26. Multi Value Field uses the following? Choose most appropriate option

- A. **Multi value link**
- B. Join
- C. Dynamic picklist
- D. None of the above

27. What are the limitations of a Service Workflow? Select all that is applicable.

- A. Can be paused and resumed as an inbox item
- B. **Cannot wait for a run-time event or pause for time**
- C. Backward compatibility for an existing workflow process
- D. **Cannot include a user interact step or a wait step**

28. Multi Value Field is a field in the Parent BC which is mapped to a field in the Child BC, State True or False

A. **True**

B. false

29. When Owner Delete Property is set to TRUE enables only the record owner to delete the record. State True or False

A. **True**

B. false

30. S_CONTACT_X is an extension table to which Table? Choose most appropriate option.

A.S_PARTY

B.S_ORG_EXT

C.S_CONTACT

D.S_OPTY

31.To Invoke a Workflow from another Workflow, Which Step is used? Choose most appropriate option.

A. **Sub Process**

B. Sub Task

C. Siebel Operation

D. Decision Point

32. Shirin, revises a workflow. Makes changes to the latest version of the WF. Will the changes be propagated to the previous version of the latest WF?

A. Yes, it will

B. No, It won't

33.What are the impacts of the Publish/Activate button on workflow? Choose two most appropriate options

A. Sets the WF status to completed

B. Go to Administration-Business Process >Workflow Deployment and select the WF and Click activate

C. Check in the Completed WF to the server repository

D. Transfers the definitions to run-time tables from the repository tables

34. Outer Join Flag when set to TRUE, what happens? Choose most appropriate option

Choose the best of option

A. Return all the records from the base table even when matching records exists

B. Returns all the records from the base table even when no records exist

C. Returns only single record from the joined tables

D. Returns only single record from the base table

35. Which property determines the default drilldown object for the dynamic drilldown? Choose most appropriate option

A. Hyperlink field

B. view

C. Source field

D. sequence

36. Identify the incorrect statement regarding Decision Step in Siebel workflow process.

Choose the appropriate option.

A. Enables branching to one of multiple steps based on the input value

B. Each Decision step has two branches based on the value

C. The decision is made based on the contents of the branch

D. Right click on branch>edit Conditions to Compose the condition

37. Which of these statements are true with respect to workflow simulator consideration?

Choose the best option

A. Can simulate WF that invoke Server Components

B. Can simulate WF with run time events on the start step

C. Can simulate WF having User interact step

D. None of the above

38. identify the properties that are populated when creating M:M Link. Choose three most appropriate options

A. Source field

B. Destination BC

C. Inter Table

D. Inter parent Column

E. Destination Field

39. From New Party Business Component. To fetch data from Party tables, which Type of join is used? Choose most appropriate option

A. implicit joins

B. explicit joins

C. no joins required

D. Party joins

40. What is the use of primaries in MVG applet?

Choose the best option

A. Enables sorting of data easily on parent applet

B. Enables sorting of data easily on child applet

C. Allows faster retrieval of child data for display in the parent applet

D. Allows faster retrieval of parent data for display in the child applet

40. post default = Today () + 2 and Predefault = Today () functions are set for a field. The user creates a new record and does not provide the value to this field and steps off, What value would be stored in this field?

A. today ()

B. today () +2

C. Nothing as functions cannot be used in the predefaults and postdefaults

D. blank

41. Given below are statements related to Picklists. Select which is not applicable for Dynamic Picklists.

Picklist values are stored in a table, S_LST_OF_VAL

Are created on a joined field

Through pick maps many SVF can be updated with values from the pick BC

Specify the pick applet property

42. Postdefault and Predefault value are set for a field. The user edits existing record and removes the values stored in the field. What value would be stored in this field?

Blank

43. What is Property Set? Select all that is applicable.

Array storing Name/Value Pairs

contains multiple methods

Seperate sets for input and output arguments are created

Is a child object definition under business service

44. Sujith wants to create drilldown based on a field value. Help him by identifying the steps involved in the same.

Create Drilldown objects to destination views

Select the Form applet on which drilldown needs to be initiated.

Sequence is not mandatory for drilldowns, hence skip them.

Add the drilldown objects under the Dynamic drilldown destinations for default drilldown

45. Shuttle applet contains_____ ?

MVG Applet

Association Applet

All of the above

None of the above

46. Megha creates a join between Account and Action Business component, to display Primary activity associated with an account. Select the statement that is applicable.

Action is not the BC for Activities

This is an explicit join

This is an implicit join

47. Smita is creating a link between two custom BCs, she updated Parent BC, Child BC, Inter Table, Inter Parent Column and Inter Child Column. Help her with other properties of the link

Cascade Delete = Delete

Cascade Delete = Clear

Cascade Delete = None

Inter Child Delete = False

48. Features of implicit joins are given below, Select all that is applicable.

Join definition is created

FK Field is selected in the source field property for Join Specification

Joined Fields are not editable on UI

Join Property set to the Name of the extension table

49. Service Flow workflow cannot be invoked as a sub process from 7.0 Flow. State True or False

TRUE

50. Which button completes the workflow and adds the definitions to runtime tables ?

Publish

Publish / Activate

Revise

Expire

Start Simulation
